Despite a growing mountain of evidence showing that the experimental Covid vaccines are ineffective at preventing infection and transmission, the Indonesian minister of health called for the G20 to have a global digital health certificate to track the movement of vaccinated individuals.

Health Minister of Indonesia Budi Gunadi Sadikin advocated for a global digital health certificate during the B20 Summit in Bali, Indonesia.

The **Business 20** (*B20*) is an event that is part of the G20 *Summit*: it is meant to express common views from the international business community.
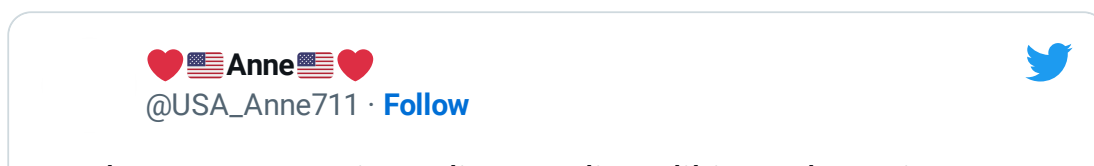

The two-day Business 20 (B20) Summit 2022 in Bali, Indonesia, gathered global business leaders to offer policy recommendations to the G20 Summit to solve important business concerns.

Speaking to the crowd, Sadikin said, "Let's have a digital health certificate acknowledged by WHO. If you have been vaccinated or tested properly, then you can move around. So for the next pandemic, instead of stopping the movement of the people one hundred percent, which [collapse] the economy globally, you can still provide some movement of the people."

Sadikin went on to say that an agreement to have this digital certificate using WHO standards had been reached between the G20 countries and Indonesia.

"Indonesia has achieved… G20 countries have agreed to have this digital certificate using WHO standards, and we will suck it into the next World Assembly in Geneva as the revision to international health regulations. So hopefully, for the next pandemic, we can still see some movement of the people, some movement of the goods, and some movement of the economy."

At the B20 Summit Budi Gunadi Sadikin, Indonesian
Health Minister calls for a digital health certificate:

"Let's have a digital health certificate acknowledged by
WHO. If you have been vaccinated or tested properly, then
you can move around…"

If this will pass, those who choose not to get vaccinated will be forced to
give up their basic human rights.

It can be recalled that the Bill & Melinda Gates Foundation **donated** $1.27
billion to "advance progress toward the global goals" during United
Nations General Assembly week this year, with $200 million going toward
the development of an invasive global digital ID system. (*Klaus Schwab
and Bill Gates attended the G20 Summit.*)

HIMSS (Healthcare Information and Management Systems Society), a
member-based society committed to reforming the global health
ecosystem, stated that "there are several important policies and ethical
considerations for effective implementation."

With multiple U.S. and global entities seeking to create their own version of a digital health passport, there is an increased risk of creating numerous disparate systems that are not interconnected and thus have no universal applicability. Incompatible standards along with solutions that are not designed for interoperability will likely lead these efforts to create a fragmented system that undermines both the adoption and the utility of digital health passports.

These include equity, privacy, and civil liberties, including consideration of the needs of those who are medically or otherwise ineligible for vaccination. All of these interests and values must be protected and enhanced in this effort to restore intra-national and cross-border mobility in the face of the COVID-19 pandemic and as these digital credentials are more widely applied to other use cases. As emerging digital health passports are developed and implemented, guidance on best practices, and a better understanding of the technical, ethical and policy considerations in the U.S. and globally will help the industry with meaningful, scalable adoption.
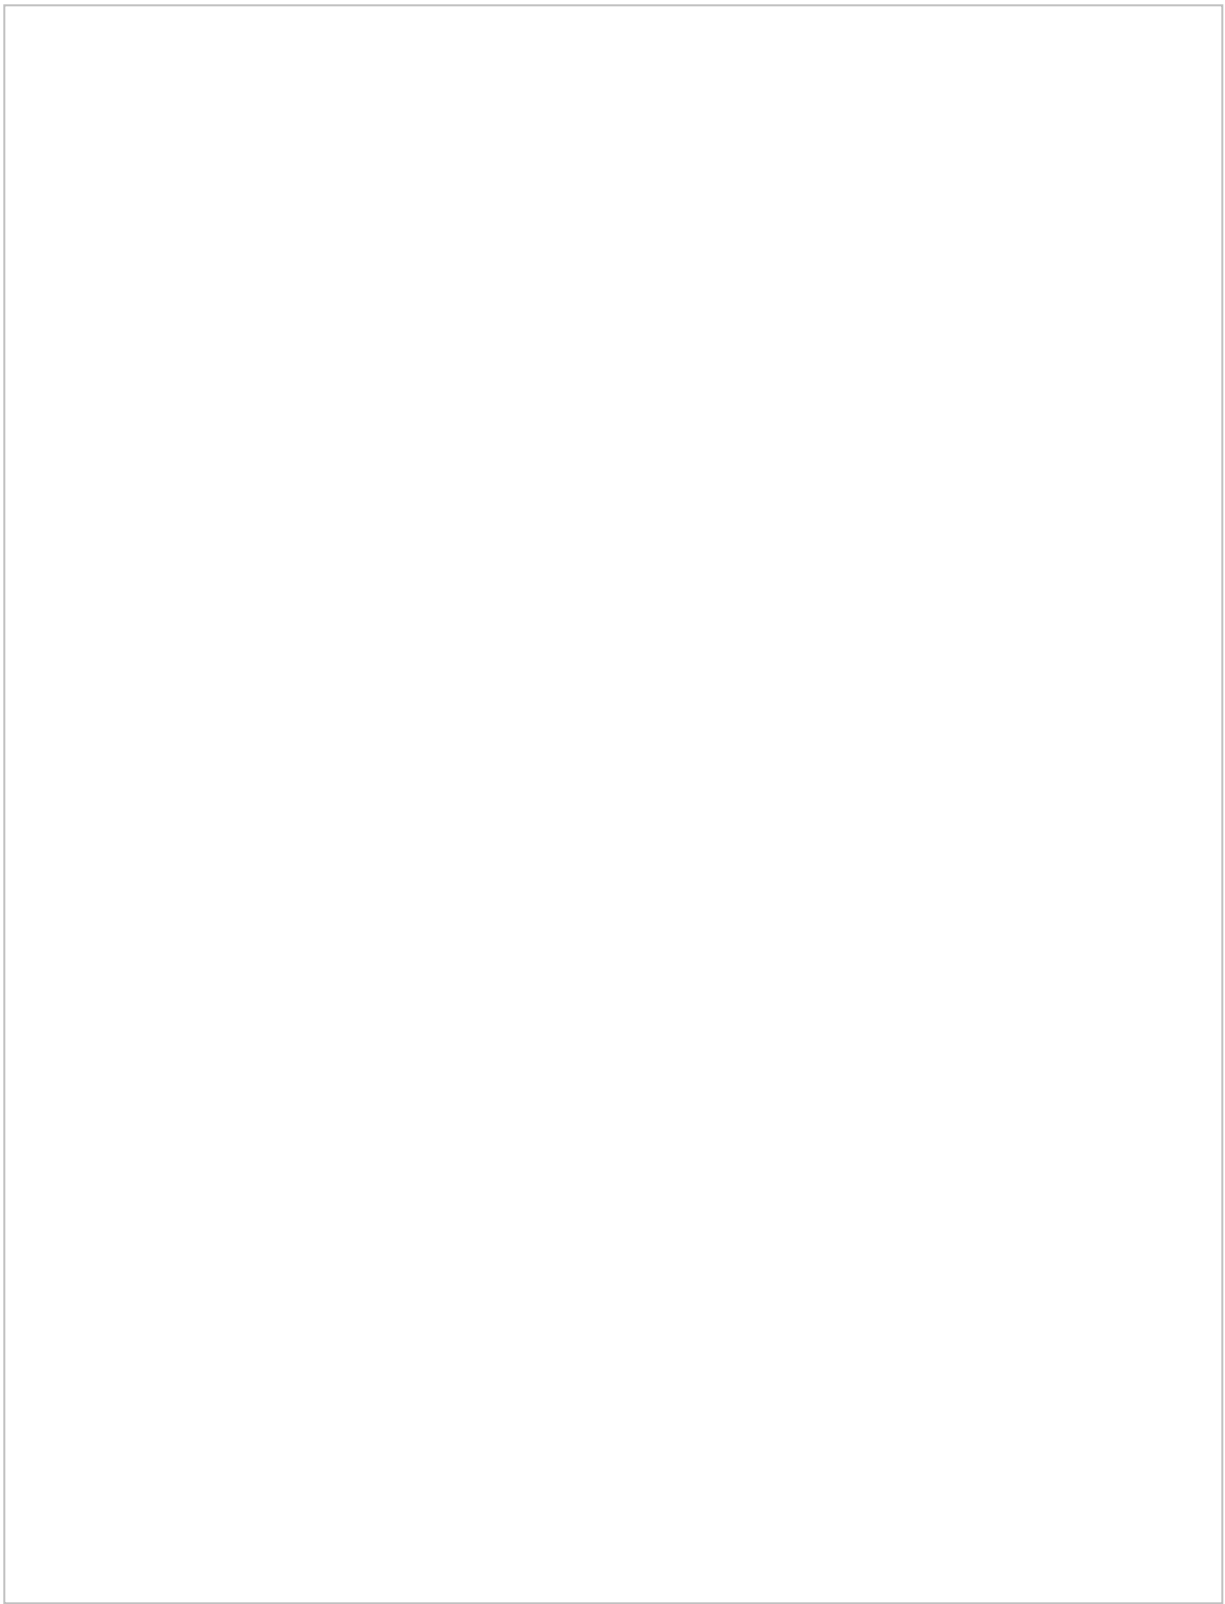

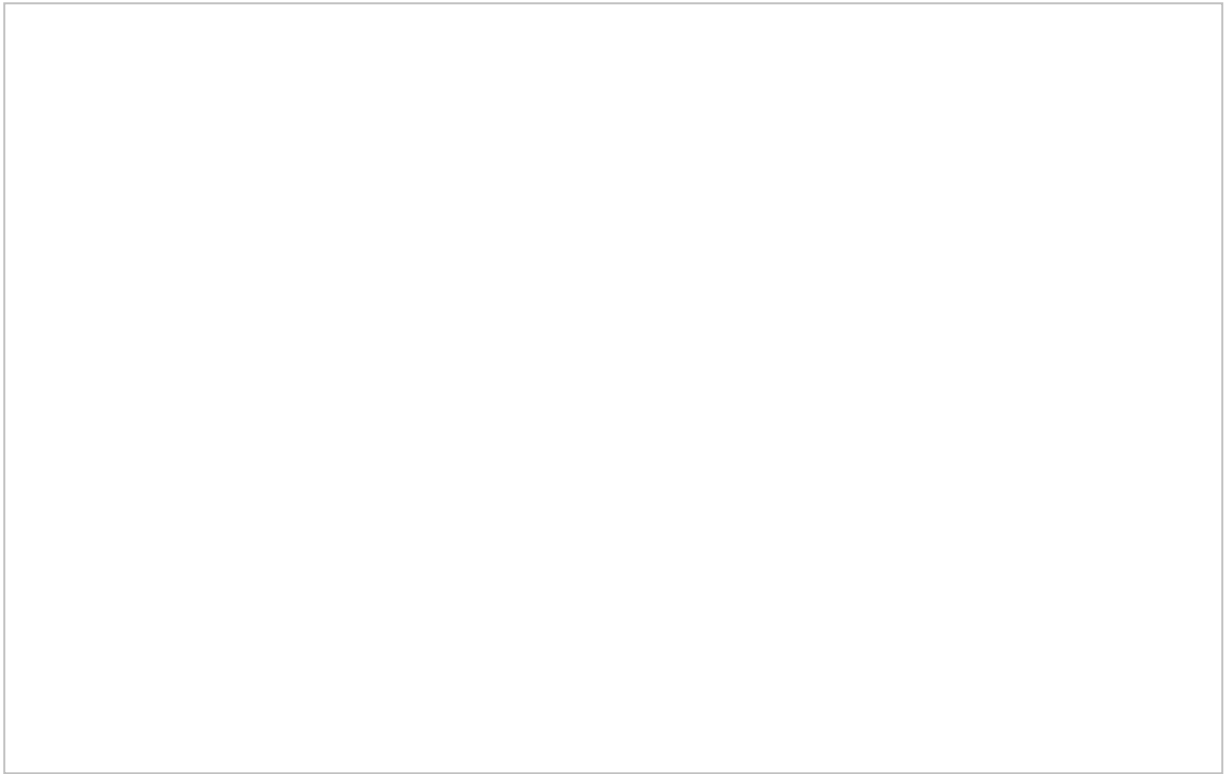

Below are some existing policies:

Examples of Existing Technologies and Objectives

As of December 31, 2021

Digital Health Pass	Technology Descriptions and Initiatives
Clear Health Pass	The Clear Health Pass is accessed via Clear's mobile app for smartphones. The software uses biometrics to identify the user, can integrate lab results from COVID-19 testing at over 30,000 labs, link to a personal healthcare account in order to confirm vaccine records, and offer a real-time health survey to screen for symptoms.
Common Pass	The CommonPass mobile app (which can be used directly or through an approved third-party app that is part of the CommonTrust Network) allows individuals to access their lab results and vaccination records through existing health data systems, national or local registries, or personal digital health records. The CommonPass platform then assesses whether the individual's lab test results or vaccination records (1) come from a trusted source, and (2) satisfy the health screening requirements of the country an individual wants to enter.
European Union Digital COVID Certificate	The EU Digital COVID Certificate contains a QR code with a digital signature. When the certificate is checked, the QR code is scanned and the signature verified, to be accessed digitally or in paper format. The Regulation on the EU Digital COVID Certificate will apply for 12 months as of July 1, 2021.
IBM Digital Health Pass	IBM Digital Health Pass technology allows businesses to establish entry criteria and validate health credentials in a decentralized way using blockchain technology. It can allow an individual to
